Case Study

The paving for this large balcony and steps down to another paved terrace area around an ornamental stone fountain, had to be refurbished with the existing sandstone balustrade and feature fountain being retained.

The owner selected Tower Sawn Sandstone paving slabs for the project and for the jointing works, GftK's vdw 800 jointing mortar from NCC Streetscape was recommended by the natural stone specialists from PDG Groundworks, the landscaping contractor.

For these areas the vdw 800 Jointing Mortar was used in the 'natural' colour shade, to blend with the colours of the stone paving. This water dispersed, epoxy-based material is fast curing, non-staining, extremely durable and sufficiently permeable to allow any surface water to drain away easily, as well as running off to the installed falls.
