

## Private Residence

Parbold, Lancashire

## Case Study

This high quality balcony and terrace area was created for the customer by the natural stone specialists from PDG Groundworks; they used random length, six sided, cut slabs of Magma Granite, with crystal black granite edging blocks.

To ensure the paving retains its attractive appearance and function for the long term, PDG Groundworks used GftK's vdw 800 jointing mortar, as it is sufficiently permeable to allow rain water to drain away efficiently, as well as running off to the installed falls.

Importantly for both customer and contractor, vdw 800 jointing mortar is non-staining, even on many sensitive stone surfaces, plus it can be installed and put into service very quickly. Additionally, it reliably prevents weed growth and boring insect infestations.
