Case Study

The patio and terraced areas outside of this Scandinavian style summer house, which is also functions as a home office in the owner's garden, was laid in 30mm thick, saw cut sandstone flags with a flamed finish. The paving jointing was completed using GftK's vdw 800 jointing mortar in a contrasting basalt colour, to enhance and highlight the random slab sizes and create a distinct and unique appearance.

The natural stone specialists from landscaping contractor PDG Groundworks specially selected the vdw 800 jointing mortar, as it is non-staining, even on many sensitive stone surfaces. It is also highly durable in service and sufficiently permeable to allow rainwater to drain away quickly, as well as running off to the installed falls.

Additionally, the advanced vdw 800 jointing mortar prevents weed growth and boring insect infestations, thus providing years of maintenance free service.
