

Private Residence

Crawford, Lancashire

Case Study

This prestige stone driveway was created for the owner using 100mm rumbled magma granite setts. The natural stone paving specialists from PDG Groundworks, the hard landscaping contractor, recommended that the setts be jointed with the slurry applied, self compacting and non-staining vdw 850 jointing mortar from NCC Streetscape.

This unique material is the 'state-of-the-art' and market leader in paving jointing technology today. It provides extremely strong and durable joint installations, especially for driveways and roads, because it is capable of accommodating frequent vehicle traffic loads. It also prevents weed growth, boring insect infestation, plus it is resistant to de-icing salts, freeze thaw action and to mechanical street sweepers.

The vdw 850 jointing mortar developed by GftK in Germany also has additional advantages in application, because it is extremely fast to apply and then it hardens rapidly, allowing the customer to put the areas back into service as soon as possible.
