Case Study

The owners of this property in Southport were looking for a strong, robust and durable pointing system to use for a makeover of their large and intricately laid out paved patio areas. Following on-line research, they decided that vdw 850+ paving joint mortar from NCC Streetscape was the ideal solution.

GftK's vdw 850+ is a non-staining, 2-part epoxy paving mortar, ideal for all types of natural stone paving. This is applied by wet slurry techniques, and will harden even in the cold and wet, so no delays in working due to inclement weather. Additionally it is effectively self-compacting into the joints, with no additional tooling, which makes the application extremely quick and clean.

The specialist paving contractor CR Services were employed to carry out the patio refurbishment works. Prior to grouting the joints, the surfaces were jet-washed and thoroughly cleaned using NCC Black Spot & Green Growth Remover, which removes green staining and dark lichen deposits from the pores, bringing back the beauty of the natural stone. Finally, the joints were repointed with the vdw 850+ from a comfortable standing position, which enabled CR Services to complete the job extremely quickly and efficiently.
