Case Study

This Khandla Sandstone patio was laid by CR Services, back in 2015, and grouted using GftK's unique, 2-part epoxy resin based, vdw 850+ paving jointing mortar, which was supplied by NCC Streetscape. After seven years of frequent use for countless family events and frequent Alfresco dining, the paving and grouting were still sound and in perfect condition, but the surfaces needed a good clean, especially to remove green growth and hard to remove 'black spots', which are actually lichen deposits in the surface pores.

CR Services were contacted again and asked to advise on the best solution and then to undertake the works to restore the patios to pristine condition. They recommended initial jet washing, followed by application of NCC Black Spot and Green Growth Remover, also from NCC Streetscape, which does exactly as it says, and removes unsightly green staining, as well as the difficult lichen blackspots!

The homeowner was delighted with both the durability of the vdw 850+ Paving Joint Mortar, and the remarkably effective NCC Blackspot & Green Growth Remover, as now, after this cleaning process, the patio looks as good as the day it was laid.
