

## DIY Success in Patio Repointing, Aylesbury, Bucks

### Case Study

**Patio Grout - with GftK Technology** was recommended by NCC Streetscape to this home owner, who wanted to re-grout his tired patio himself. The unusual orange and cream concrete paving slabs were generally in good condition, but the original cement joints and previous patch repairs with different jointing compounds, were all failing and becoming increasingly unsightly.

**Patio Grout** is unique, one-component, (no mixing required), air-drying, joint mortar that has big advantages and is easier and faster to apply by the most efficient use of wet slurry application, which provides optimum self-compaction into the joints, with no additional tooling required. Patio Grout is also outstanding in comparison with any other air-drying, 1-part, paving joint compounds, because of its higher strengths and higher performance. Additionally, it is applied on thoroughly pre-wetted surfaces and can be applied in light rain, so there is no need to wait for dry weather or forecasts – a big advantage in the UK!

**Patio Grout** is designed for Professional and DIY use on domestic paving with pedestrian traffic, i.e., for garden patios and paths, where it is suitable for both new paving & paving repointing projects, and for grouting all different types and sizes of natural stone and concrete paving. The ease of application and minimal cleaning works, plus the attractive finish, were a win - win - win for the owner, who was delighted with the result.
