Patio Repointing - Easy for DIY Aylesbury, Buckinghamshire

Case Study

This domestic patio and paths were generally in good condition, but the original cement pointing and previous repairs with various different jointing compounds, were all failing and becoming increasingly unsightly. After some research online, the owner spoke to NCC streetscape and they recommended **Patio Grout-with GftK Technology**, as the ideal solution, particularly as he wanted to do the work himself. **Patio Grout** is designed for both professional and DIY users, and the homeowner chose the charcoal grey 'Basalt' colour for an attractive contrast with his unusual orange and buff coloured paving slabs.

Patio Grout is a unique formulation with big advantages – It is easier and faster to apply, because it allows the most efficient and effective use of wet slurry application, which provides optimum self-compaction into the joints, with no additional tooling or finishing required. It is outstanding in comparison with any other air-drying, 1-part, paving joint compounds, because of its higher strengths and higher performance.

Originally worried about tackling the project in Autumn, the owner was reassured by another advantage of **Patio Grout**, no waiting for dry weather and forecasts, because it can safely be applied in light rain. After removing the failed existing grout and cleaning the joints by jet washing and raking them out, the repointing with **Patio Grout** was easily completed in a single morning. There were minimal cleaning works, plus the owner was delighted with the attractive finish.
