

Driveway, Patio & Pathway

Urmston, Greater Manchester

Case Study

The owners of this property in Urmston were looking for a strong, robust and durable jointing system to use for a makeover of their sandstone patio and pathways and concrete flag driveway. Following on-line research, they decided that GftK vdw 850plus paving joint mortar from NCC Streetscape was the ideal solution, as it was durable and non-staining, and would easily stand up to their vehicle movements for a long time to come.

GftK's vdw 850plus is a 2-part epoxy paving mortar, ideal for all types of natural stone paving. It is applied by wet slurry techniques, and will harden even in the cold and wet, so no delays in working due to the UK's unpredictable weather. In fact, the wetter the better, as it is wet slurry applied and effectively self-compacts into the joints, with no additional tooling required.

The specialist paving contractor CR Services was employed to carry out all the paving refurbishment works. Prior to repointing the joints, the failed pointing was removed, the surfaces were jet-washed and then thoroughly cleaned using NCC Black Spot & Green Growth Remover, which removes green growths and black spot lichen deposits from the pores, bringing back the beauty of the natural stone. Finally, the joints were repointed, with GftK vdw 850plus from a comfortable standing position, which enabled the job to be completed extremely quickly, cleanly and efficiently.
