

Porcelain Patios with Granite Sett Detailing, Hampshire

Case Study

This garden owner worked with his contractor to produce a right on-trend patio design, using the latest external porcelain tiles in combination with traditional tumbled granite setts for striking feature edging and detailing. To complete this for practical reasons, they also wanted to use the same jointing system for both materials, which then also had to be able to withstand frequent jet washing of the paved surfaces to keep the garden in tip-top condition.

After some research online and then talking to NCC streetscape, they identified that GftK's vdw 850+ was the ideal solution for both, plus at this early time of the year, they would not be restricted in trying to find a suitable weather window to complete the pointing. This is because the vdw 850+ can be applied at low temperatures and in wet weather, which together with its speed of installation, was naturally also an attractive advantage to Fairview Drives and Design, who were to be a first-time user of this unique paving joint mortar.

The end result, the overall ease of application with minimal cleaning works, as well as the highly aesthetic finish were a win : win bonus for both the owner and their contractor.
