Case Study

The homeowner of this property in Knutsford, was very proud of his natural porcelain patio which he regularly jetwashed to keep it clean and in pristine condition. Unfortunately, after only 18 months, he discovered that the original external tile grout was not up to the job and it was failing and being washed out, leaving unsightly gaps in many places. After extensive research, the owner contacted specialist paving contractor CR Services and asked them for advice in replacing the original pointing mortar with a tough and durable solution.

CR Services, together with their specialist material supplier NCC Streetscape, decided that GftK vdw 850+, an advanced, 2-part epoxy paving mortar was the ideal solution for this project with 6mm wide joints. GftK vdw 850+ high performance mortar is non-staining, (staining is another problem when using cement based joint mortars), it can be regularly and safely jet-washed, and can be installed in lower temperatures and wet conditions - a huge advantage in the unpredictable British weather.

Working with vdw 850+ is both fast and efficient, and CR Services completed the refurbishment of the porcelain patio in good time. The homeowner was so delighted with the result, that he recommended vdw 850+ and CR Services to neighbours and friends who have since employed them to complete similar projects on their patios and paths.
