RESIBLOCK

Indian Sandstone Sealer

Indian Sandstone is a classic sedimentary rock formed around 350 million years ago from small grains of minerals, quartz and feldspar. These deposits settled layer upon layer

Colour Enhancer

Before

After

at the bottom of shallow seas or lakes and over millions of years formed solid rock.

Indian Sandstone is a beautiful hard landscaping medium suitable for paths, patios and even driveways. As with all external paving, this investment can be protected with Resiblock.

Resiblock Indian Sandstone Sealer is a low viscosity prepolymer surface sealer available as a colour enhancer or invisible seal.

Its penetration comes about by solvent evaporation, polymerisation being effected by atmospheric moisture. It incorporates a completely unique moisture curing system. Its function is to bring about the enhancement of Indian Sandstone and **other forms of natural stone.**

Invisible

Before

After

- Ensure surface is dry & clean before sealing
- Coverage 4-6m² per litre
- Allow 3-6 hours before walking on surface.

Resiblock Indian Sandstone Sealer is suitable for most forms of natural stone. For advice contact Resiblock Technical Department on 01268 273344.
